[ N | E | M | S ] stands for Novel Engineered Materials & Solutions and we have set ourselves the task to accompany customers with their different and individual material requirements in partnership and long-term. The development of relevant strategic solutions, technologies and the provision of related services and consulting are the focus of our team [ N | E | M | S ].

## **YOUR GOAL SHOULD BE:**

Join the team and share our vision of continuous innovation and the supply of ingenious materials, technologies & solutions for any kind of platforms.

## **IT IS BEING SEARCHED FOR:**

- integration of protection systems in civil and military vehicles
- professional implementation and development of construction in CAD (2D / 3D)
- new & further development of protection systems e.g. ballistics from design & development through prototyping and testing to industrial production
- planning, execution, evaluation of technical documentation of test series and constructions
- development and production of documents for production in cooperation with further production
- technical support of the entire team

## **REQUIRED TASKS ARE:**

- completed degree in mechanical engineering, material sciences or comparable technical experience
- very good knowledge and safe handling in CAD (2D / 3D)
- experience in the professional use of various types of machining (as CNC; Laser etc.) & systems integration
- several years of professional experience in the development and handling of complex project requirements, in particular for protection (ballistics, confidential information & data
- teamwork and commitment in a dynamic and visionary team
- willingness to travel (national & international)
- preferable multi-lingual (english & german)

Achieve the target of the global strategic material suppliers and protection experts. Take part in the success of the leaders and document your interest by sending your application by email or post.
